

一、今日前沿论文精选

1. NAT10 promotes proliferation, invasion, and epithelial-mesenchymal transition in hepatocellular carcinoma through α -tubulin acetylation.

- 发表期刊 / 影响因子:Cell adhesion & migration
- 发表时间:2026
- 第一/通讯作者:Haogang Yu, Kankai Zhu, Guoliang Zhang, Yang Dong, Xiaodong Wang
- 核心结论:Hepatocellular carcinoma (HCC) remains a global health challenge due to its high metastatic potential and poor prognosis. This study investigated the role and underlying molecular mechanisms of N-acetyltransferase 10 (NAT10)-mediated α -tubulin acetylation in HCC progression. Using Huh-7 and SNU-449...
- 原文DOI / 链接:10.1080/19336918.2026.2697609

2. Farnesyltransferase Enables Modular Assembly of Dual-Functional Nanobody Conjugates for in Vivo Imaging of Inflammation.

- 发表期刊 / 影响因子:Angewandte Chemie (International ed. in English)
- 发表时间:2026-Aug-24
- 第一/通讯作者:Sneha Venkatachalapathy, Yoon Ho Lee, Ali Salehi Farid, Heydar Moravej, Sina Djafari Rouhani
- 核心结论:Non-invasive imaging of inflammation is critical for disease diagnosis, monitoring, and therapeutic evaluation. Nanobodies, due to their many unique properties, are emerging as powerful imaging agents; however, conventional non-specific conjugation strategies often yield heterogeneous products that...
- 原文DOI / 链接:10.1002/anie.5009703

3. CHST1 Drives Immunotherapy Resistance in Triple-Negative Breast Cancer by Orchestrating an Immunosuppressive Microenvironment via the NKRF-CCL20-Macrophage Axis.

- 发表期刊 / 影响因子:Advanced science (Weinheim, Baden-Wuerttemberg, Germany)
- 发表时间:2026-Aug-24
- 第一/通讯作者:Shu-Hao Jiang, Xiao-Han Ying, Ruo-Qing Wang, Qun Zhang, Li Chen
- 核心结论:Triple-negative breast cancer (TNBC) derives limited benefit from immune checkpoint blockade, largely owing to primary resistance shaped by the tumor immune microenvironment. Here, baseline transcriptomic profiling of a neoadjuvant chemoimmunotherapy cohort identified carbohydrate sulfotransferase 1...
- 原文DOI / 链接:10.1002/adv.77356

4. Increased global burden of metabolic dysfunction-associated steatotic liver disease is also seen in women of reproductive age.

- 发表期刊 / 影响因子:Indian journal of gastroenterology : official journal of the Indian Society of Gastroenterology
- 发表时间:2026-Aug-24
- 第一/通讯作者:Waseem Amjad, Paul J Thuluvath
- 核心结论:参见原文摘要
- 原文DOI / 链接:10.1007/s12664-026-02061-w

5. Metabolically Active but Dysfunctional: The Impact of Senescent Cells and SASP.

- 发表期刊 / 影响因子:Technology in cancer research & treatment
- 发表时间:2026
- 第一/通讯作者:Kai Xu, Saatvik Viniak, Pratham Viral Shah, Ismihan Uddin, Zarqa Alam
- 核心结论:The accumulation of senescent cells in metabolic tissues, including adipose tissue, liver, pancreas, and skeletal muscle - along with the senescence-associated secretory phenotype (SASP) has emerged as a significant factor in developing chronic inflammation and metabolic dysfunction. Senescent cells...
- 原文DOI / 链接:10.1177/15330338261481909

6. Primal Acceleration of Newton's Method

- 发表期刊 / 影响因子:arXiv Preprint
- 发表时间:2026-08-21
- 第一/通讯作者:Nikita Doikov
- 核心结论:We develop a new direct accelerated Newton method for minimizing convex functions with Lipschitz continuous Hessian. The algorithm uses only primal variables and performs just one linear solve per iteration. With a simple predetermined choice of parameters, it achieves the global convergence rate of...
- 原文DOI / 链接:https://arxiv.org/abs/2608.21359v1

7. VIALS: A Benchmark for Visual Interpretation of Artifacts in the Life Sciences

- 发表期刊 / 影响因子:arXiv Preprint
- 发表时间:2026-08-21
- 第一/通讯作者:Elaine Lau, Thanuka Udumulla, Lee Izhaki-Tavor, Francisco Guzmán, Nicholas Magazine
- 核心结论:In professional life sciences workflows, scientists routinely interpret visual artifacts (gel blots, microscopy images, plasmid maps, flow cytometry plots, molecular structures, ...) to inform research decisions. We introduce VIALS, a visual question-answering benchmark with 161 such interpretation...
- 原文DOI / 链接:https://arxiv.org/abs/2608.21357v1

8. Primal Acceleration of Newton's Method

- 发表期刊 / 影响因子:arXiv Preprint
- 发表时间:2026-08-21
- 第一/通讯作者:Nikita Doikov
- 核心结论:We develop a new direct accelerated Newton method for minimizing convex functions with Lipschitz continuous Hessian. The algorithm uses only primal

variables and performs just one linear solve per iteration. With a simple predetermined choice of parameters, it achieves the global convergence rate of...

- 原文DOI / 链接:<https://arxiv.org/abs/2608.21359v1>

二、科研公众号干货

说明:微信公众号文章检索需要微信搜一搜等公开渠道的即时访问能力,当前自动检索模块正在优化中,建议通过以下方式自行获取:- 关注「肿瘤放疗」、「生信技能树」、「医学僧的科研日记」等公众号 - 使用微信搜一搜搜索关键词:肿瘤放疗 生信分析 - 本板块将在后续版本中接入 WeChat 公开内容 API

三、每日高分经典精读

Stereotactic Body Radiation Therapy for Hepatocellular Carcinoma: Current Trends and Future Directions

- 发表期刊 / 影响因子 / 总引用量:International Journal of Radiation Oncology, Biology, Physics / IF=7.0 / 引用量:200+
- 研究背景与里程碑意义:SBRT has emerged as a definitive local treatment for HCC, but optimal dosing, patient selection, and integration with systemic therapies remain active areas of investigation.
- 核心实验设计与方法:Comprehensive review of clinical trials and retrospective studies of SBRT for HCC, including dose-escalation studies, toxicity analyses, and combination strategies.
- 关键结论与行业影响:SBRT achieves local control rates of 80-95% for early-stage HCC with low toxicity. Challenges include BCLC stage-specific outcomes, liver function preservation, and optimal sequencing with immune checkpoint inhibitors.
- 创新点:Systematic framework for SBRT dose selection based on tumor size, location, and liver function; proposed risk-adapted fractionation schedules.
- 原文DOI / 链接:<https://doi.org/10.1016/j.ijrobp.2023.01.045>

四、当日总结

今日共精选8篇最新研究+1篇经典精读。关注方向:NAT10 promotes proliferation, invasion, and epithelial-mesenchymal transition in hepatocellular carcinoma through α -tubulin acetylation.
