

一、今日前沿论文精选

1. CD112 Lactylation Drives Dual Immune Evasion From CD8+ T Cells and NK Cells.

- 发表期刊 / 影响因子:Advanced science (Weinheim, Baden-Wurttemberg, Germany)
- 发表时间:2026-Oct-04
- 第一/通讯作者:Zhuoshuo Xu, Xinyu Zhang, Fang Dong, Nenghao Shen, Jun Zhou
- 核心结论:Current cancer immunotherapy predominantly targets CD8+ T cells, leaving NK cell surveillance largely unaddressed. We report that lactylation of the membrane checkpoint ligand CD112 serves as a convergent mechanism for dual immune escape. In contrast to T cell-centric checkpoints such as PD-L1, CD11...
- 原文DOI / 链接:10.1002/advs.78088

2. Phase 1 dose escalation and expansion trial of the bispecific CD47 inhibitor and CD40 agonist Fc-fusion protein SL-172154 (SIRPα-Fc-CD40L) in patients with higher-risk myelodysplastic syndrome or acute myeloid leukemia.

- 发表期刊 / 影响因子:Cancer
- 发表时间:2026-Oct-01
- 第一/通讯作者:Naval G Daver, Amer M Zeidan, Anthony S Stein, Joshua F Zeidner, Keri Maher
- 核心结论:This clinical trial sought to determine whether SL-172154 could be combined safely and improve the efficacy of azacitidine (AZA) in patients with higher-risk myelodysplastic syndrome (HR-MDS) or acute myeloid leukemia (AML). Dose escalation: doses of 1, 3, and 6 mg/kg SL-172154 was evaluated as mono...
- 原文DOI / 链接:10.1002/cncr.70626

3. N-acetylcysteine mouthwash for prevention of oral mucositis in hematopoietic cell transplant recipients: a double-blind randomized controlled trial.

- 发表期刊 / 影响因子:Supportive care in cancer : official journal of the Multinational Association of Supportive Care in Cancer
- 发表时间:2026-Oct-04
- 第一/通讯作者:Motahareh Tahmasebi, Romina Kaveh-Ahangaran, Maryam Barkhordar, Mazda Rad-Malekshahi, Mohammad Vaezi
- 核心结论:Oral mucositis (OM) is a frequent and clinically important toxicity of conditioning therapy for hematopoietic cell transplantation (HCT). This trial evaluated whether prophylactic N-acetylcysteine (NAC) mouthwash reduces the incidence and severity of OM in HCT recipients. In this single-center, doub...
- 原文DOI / 链接:10.1007/s00520-026-11286-6

4. “Five Decades On: metALD Emerges as Liver Disease’ s New Frontier” .

- 发表期刊 / 影响因子:Cellular and molecular gastroenterology and hepatology
- 发表时间:2026-Oct-03
- 第一/通讯作者:Thomas Baumert, Brian J DeBosch
- 核心结论:This year marks the 50th anniversary of the American Liver Foundation (ALF). Over the five ensuing decades since its inception, the ALF has advocated for and advanced research and public awareness in liver disease. The rise and subsequent improvement of viral hepatitis prevalence during this time co...
- 原文DOI / 链接:10.1016/j.jcmgh.2026.101915

5. Hepatic delivery of FXR mRNA via lipid nanoparticles enhances the efficacy of a low-dose FXR agonist in the treatment of MASLD.

- 发表期刊 / 影响因子:Nanomedicine : nanotechnology, biology, and medicine
- 发表时间:2026-Oct-03
- 第一/通讯作者:Yuqing Shen, Xuan Cai, Huaijun Zheng, Zetong Zheng, Li Wu
- 核心结论:Farnesoid X receptor (FXR) regulates hepatic lipid metabolism and is a promising target for metabolic dysfunction-associated steatotic liver disease (MASLD), yet the efficacy and tolerability of FXR agonists may be influenced by their dose and tissue distribution. Thus, this study aimed to evaluate...
- 原文DOI / 链接:10.1016/j.nano.2026.103036

6. JOVE: Joint Execution and Verification for Resource-Aware LLM Task Graphs

- 发表期刊 / 影响因子:arXiv Preprint
- 发表时间:2026-10-02
- 第一/通讯作者:Haoran Zhang, Dongjun Kim, Seohyeon Cha, Kevin S Chan, Ananthram Swami
- 核心结论:Complex reasoning queries can be decomposed into directed acyclic task graphs and distributed across heterogeneous LLMs, reducing latency through parallelism and enabling smaller models to solve complex tasks. In practice, however, the suitability of an LLM for a given subtask may be a priori unknow...
- 原文DOI / 链接:https://arxiv.org/abs/2610.03296v1

7. EVOL: Simulator-Guided Evolutionary Expert Synthesis for Deployment-Free Learning Path Recommendation

- 发表期刊 / 影响因子:arXiv Preprint
- 发表时间:2026-10-02
- 第一/通讯作者:Geonwoo Bang, Dongho Kim, Moohong Min
- 核心结论:Reinforcement learning (RL) for learning path recommendation (LPR) faces two coupled obstacles. First, the policy must commit to a sequence of L concepts without intermediate feedback, producing a combinatorial search space that grows super-exponentially with L and provides reward only at the final...
- 原文DOI / 链接:https://arxiv.org/abs/2610.03273v1

8. S²-PINN: Stochastic Separable Physics-Informed Neural Networks

- 发表期刊 / 影响因子:arXiv Preprint
- 发表时间:2026-10-02

- 第一/通讯作者:Zhendong Li, Akwum Onwunta
- 核心结论:Uncertainty quantification (UQ) for random partial differential equations (PDEs) is ubiquitous in computational science and engineering. However, classical spectral solvers for this class of problems face the curse of dimensionality, and existing neural solvers often ignore the stochastic structure...
- 原文DOI / 链接:<https://arxiv.org/abs/2610.03303v1>

二、科研公众号干货

说明:微信公众号文章检索需要微信搜一搜等公开渠道的即时访问能力,当前自动检索模块正在优化中,建议通过以下方式自行获取:- 关注「肿瘤放疗」、「生信技能树」、「医学僧的科研日记」等公众号 - 使用微信搜一搜搜索关键词:肿瘤放疗 生信分析 - 本板块将在后续版本中接入 WeChat 公开内容 API

三、每日高分经典精读

Stereotactic Body Radiation Therapy for Hepatocellular Carcinoma: Current Trends and Future Directions

- 发表期刊 / 影响因子 / 总引用量:International Journal of Radiation Oncology, Biology, Physics / IF=7.0 / 引用量:200+
- 研究背景与里程碑意义:SBRT has emerged as a definitive local treatment for HCC, but optimal dosing, patient selection, and integration with systemic therapies remain active areas of investigation.
- 核心实验设计与方法:Comprehensive review of clinical trials and retrospective studies of SBRT for HCC, including dose-escalation studies, toxicity analyses, and combination strategies.
- 关键结论与行业影响:SBRT achieves local control rates of 80-95% for early-stage HCC with low toxicity. Challenges include BCLC stage-specific outcomes, liver function preservation, and optimal sequencing with immune checkpoint inhibitors.
- 创新点:Systematic framework for SBRT dose selection based on tumor size, location, and liver function; proposed risk-adapted fractionation schedules.
- 原文DOI / 链接:<https://doi.org/10.1016/j.ijrobp.2023.01.045>

四、当日总结

今日共精选8篇最新研究+1篇经典精读。关注方向:CD112 Lactylation Drives Dual Immune Evasion From CD8+ T Cells and NK Cells.
