

一、今日前沿论文精选

1. Targeting SLC38A5 Overcomes αPD-1 Immunotherapy Resistance by Alleviating Glutamine Competition Between Glioblastoma Cells and T Cells.

- 发表期刊 / 影响因子:Cancer research
- 发表时间:2026-Oct-05
- 第一/通讯作者:Zhuohao Liu, Jiani Lin, Tao Chen, Weimin Zhang, Ran Ye
- 核心结论:Despite the clinical success of programmed cell death protein 1 (PD-1) checkpoint blockade in many cancer types, its efficacy in glioblastoma remains notably limited, underscoring the critical need to uncover primary resistance mechanisms and identify synergistic therapeutic targets. To discover gen...
- 原文DOI / 链接:10.1158/0008-5472.CAN-26-0774

2. A reciprocally masked anti-CD47/IL-2 fusion protein promotes antitumor immunity and limits systemic toxicity.

- 发表期刊 / 影响因子:Cancer immunology research
- 发表时间:2026-Oct-05
- 第一/通讯作者:Elise Léchine, Laura Cons, Laure Garnier, Pauline Malinge, Valéry Moine
- 核心结论:Cancer immunotherapies have achieved meaningful clinical benefit but remain limited by systemic toxicities that restrict the use of potent immune modulators. CD47-targeting antibodies promote tumor cell phagocytosis but are hindered by hematologic toxicity, while IL-2 activates cytotoxic lymphocytes...
- 原文DOI / 链接:10.1158/2326-6066.CIR-26-0459

3. CD3-CSPG4 bispecific T cell engager: A novel platform for malignant melanoma therapy.

- 发表期刊 / 影响因子:PloS one
- 发表时间:2026
- 第一/通讯作者:Xue Lei, Weilan Liu, Zongnian Luo, Bangyong Wu, Yu Meng
- 核心结论:Malignant melanoma (MM) is a highly aggressive malignancy that readily metastasizes to lymph nodes and distant sites through hematogenous spread, leading to poor clinical outcomes. Therefore, there is an urgent need to develop novel therapeutic strategies. Chondroitin sulfate proteoglycan 4 (CSPG4)...
- 原文DOI / 链接:10.1371/journal.pone.0357790

4. Hepatic involvement in children with diabetes: Pathophysiology, clinical manifestations, and current management.

- 发表期刊 / 影响因子:Archivos argentinos de pediatria
- 发表时间:2026-Oct-08
- 第一/通讯作者:Carol Lezama Elecharr, Fernando Álvarez
- 核心结论:Diabetes is a chronic disease characterized by hyperglycemia resulting from insulin deficiency or resistance to insulin action. Its onset may result from polygenic or monogenic mechanisms. The liver plays a central role in glucose metabolism and can be affected by various conditions. In poorly contr...
- 原文DOI / 链接:10.5546/aap.2026-11117.eng

5. Apigenin attenuates MASLD progression by suppressing lipogenesis and macrophage M1-like inflammatory activation: involvement of SMAD4-associated signaling.

- 发表期刊 / 影响因子:Journal of molecular histology
- 发表时间:2026-Oct-05
- 第一/通讯作者:Lijun Cao, Yongna Zhao, Ping Li
- 核心结论:Metabolic dysfunction-associated steatotic liver disease (MASLD) is characterized by dysregulated hepatic lipid metabolism and persistent inflammatory remodeling. Apigenin has lipid-regulatory and anti-inflammatory activities, but the molecular basis linking these effects remains incompletely unders...
- 原文DOI / 链接:10.1007/s10735-026-11000-0

6. Off-Policy Merging Beats On-Policy Self-Distillation for Continual Learning

- 发表期刊 / 影响因子:arXiv Preprint
- 发表时间:2026-10-05
- 第一/通讯作者:Chen Henry Wu, Thomas Zhang, Aditi Raghunathan
- 核心结论:A long-standing goal of AI is a model that can continually learn and improve itself. On post-trained models, supervised finetuning (SFT) on new data often causes poor generalization and catastrophic forgetting. As such, the conventional wisdom is that on-policy training is a prerequisite for continu...
- 原文DOI / 链接:https://arxiv.org/abs/2610.05872v1

7. Weave Mamba Fusion: Global Cross-Scale Interaction for Lightweight Face Detection

- 发表期刊 / 影响因子:arXiv Preprint
- 发表时间:2026-10-05
- 第一/通讯作者:Dohun Kim, Jinmyung Jung
- 核心结论:Feature pyramid methods, from FPN to BiFPN, have achieved strong performance in face detection by fusing multi-scale features. However, detecting faces under unconstrained conditions, such as small scale, occlusion, and extreme pose, remains difficult, as it requires global cross-scale dependencies...
- 原文DOI / 链接:https://arxiv.org/abs/2610.05865v1

8. Off-Policy Merging Beats On-Policy Self-Distillation for Continual Learning

- 发表期刊 / 影响因子:arXiv Preprint
- 发表时间:2026-10-05
- 第一/通讯作者:Chen Henry Wu, Thomas Zhang, Aditi Raghunathan

- 核心结论:A long-standing goal of AI is a model that can continually learn and improve itself. On post-trained models, supervised finetuning (SFT) on new data often causes poor generalization and catastrophic forgetting. As such, the conventional wisdom is that on-policy training is a prerequisite for continu...

二、科研公众号干货

说明:微信公众号文章检索需要微信搜一搜等公开渠道的即时访问能力,当前自动检索模块正在优化中,建议通过以下方式自行获取:- 关注「肿瘤放疗」、「生信技能树」、「医学僧的科研日记」等公众号 - 使用微信搜一搜搜索关键词:肿瘤放疗 生信分析 - 本板块将在后续版本中接入 WeChat 公开内容 API

三、每日高分经典精读

Metabolic dysfunction-associated steatotic liver disease (MASLD): a growing global health priority and a real challenge for the internist.

- 发表期刊 / 影响因子 / 总引用量:Internal and emergency medicine / 2026
- 研究背景与里程碑意义:MASLD has emerged as the most prevalent chronic liver disease worldwide, reflecting the global rise in metabolic disorders such as obesity and diabetes.
- 核心实验设计与方法:Narrative review of epidemiology, pathophysiology, diagnostic criteria, and management strategies for MASLD.
- 关键结论与行业影响:Internists play a central role in early detection and multidisciplinary management of MASLD to prevent progression to cirrhosis and hepatocellular carcinoma.
- 创新点:Pragmatic clinical framework for internists to screen, stage, and manage MASLD in routine practice.
- 原文DOI / 链接:<https://doi.org/10.1007/s11739-026-04461-4>

四、当日总结

今日共精选8篇最新研究+1篇经典精读。关注方向:Targeting SLC38A5 Overcomes αPD-1 Immunotherapy Resistance by Alleviating Glutamine Competition Between Glioblastoma Cells and T Cells.
